【无锡市普尔换热器制造有限公司】
WUXI POWER HEAT EXCHANGER MANUFACTURING CO.,LTD.

- 普尔的生存空间在于市场
- 普尔的生命在于产品质量
- 普尔的管理精髓在于科学精细

Market is the space for Power to live

Quality is Powers life

Scientific details is the key of Powers management

Introduction

无锡市普尔换热器制造有限公司
WUXI POWER HEAT EXCHANGER MANUFACTURING CO.,LTD.

无锡市普尔换热器制造有限公司，地处风景秀丽的无锡国家旅游度假区，是铝制板翅式换热器的专业设计、生产企业。

公司占地面积16000m²，建筑面积10000m²。目前公司拥有职工100余人，其中专业技术人员占职工总数的30%。

公司拥有国内最先进的真空钎焊炉，以及成套的生产、制造和检测设备。换热器单元最大钎焊尺寸为2500×1000×1000。产品最大设计压力5MPa。我公司产品广泛应用于空气分离、化学工业、石油化工、汽车、船舶、工程机械、制冷空调、压缩机等业。换热器年生产能力可达800吨以上。

本公司生产规范在国内同行业处于领先行列，可根据用户不同需求进行设计和制造。

公司以科技进步为动力，质量为企业发展的永恒主题，以满足客户的需求为经营宗旨。向国内外客户提供优质的产品和满意服务项目。

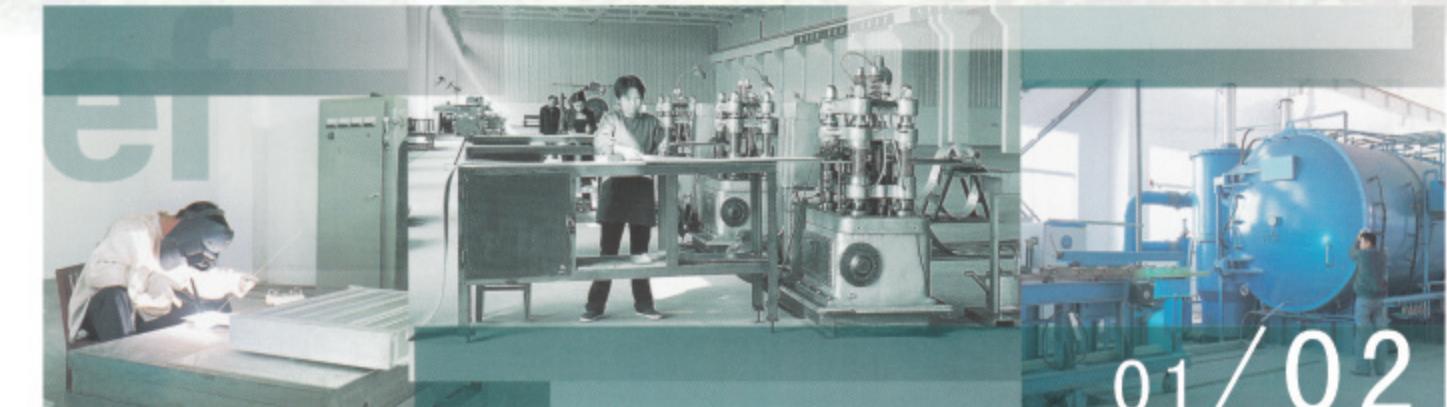

Wuxi Power Heat Exchanger Manufacturing Co.,Ltd. located at Wuxi Taihu Lake scenery tourist resort. We specialize in designing and producing aluminum plate-bar heat exchangers.

Our company covers 16000 m², and the building area is 10000m². And our annual production capacity is about 200metric tons. We have more than 100 employees,40% of whom are technical and professional.

At present, Wuxi Power has the most advanced vacuum brazing furnace, fin shaping machine and professional testing equipment. The maximum size for heat exchanger can reach to 7200×1250×1300mm. The maximum pressure of designing for product is 5Mpa. Our products are widely used in air separator, automobiles, cooling air-condition, engineering machinery, compressors etc.

Scientific and technological development is the most advanced force. Customer is the most important one. This is our commission.

With China's accession to WTO, Wuxi Power Heat Exchanger Manufacturing Co.,Ltd. will supply you the best products.

提示和建议

- 关于采用吹风式或吸风式风扇及冷却器的安装位置，应主要考虑防止冷却器吸入已被其它元件加热了的热空气、防止从冷却器排出的热空气影响设备和人员的正常工作以及保证进风和排风的畅通。
- 使用中应避免流量的突然变化和压力冲击，以保证最大允许静态工作压力不超过。为保证冷却器工作的安全性，建议用户，与冷却器并联一旁通阀（单向阀）直接通油箱。
- 对非连续设计负荷下的系统，为了便于把油温控制在合理范围，建议用户加装一温控开关，并控制风扇的转停。
- 由于工作系统的多样性和安装环境的复杂性，我们建议用户在系统设计阶段能咨询我们的技术部门，我们愿提供更多的技术资料供您参考。

09 / 10

一、简介

我公司生产的混凝土搅拌车用油冷却器总成系列产品，在多年的实践使用中，性能良好，受到客户的一致好评。该总成集冷却器、油箱、风扇、导风罩、风扇罩防护网、温度开关、过滤器于一体，油箱与散热器做成一体，过滤器通过法兰连接在油箱上。供选用的型号请参见第一页上的表格。

二、安装位置及连接方式

冷却器在车的安装位置，建议放在通风流畅的地方，保证冷却风的流入流出不受任何阻碍，避免经过冷却器后的热风重新流入冷却器。

冷却器由两个下支脚与车架相连，安装过程中需使用防震块，以减少车辆行驶途中的振动冲击，从而延长冷却器的使用寿命。

三、油箱

油箱顶部设有加油口和压力平衡口，侧面装有油位表。在初次使用时，加油应加到油标中线位置上，加油过程中应尽量排清系统中的空气，每次加油后，应将加油螺塞盖紧。

四、电气连接

冷却器所使用的电机为直流电机，其使用寿命为3000工作小时，由于直流电机不适合于长期连续运转，为此，在使用过程中一定要与温度开关和接触器一起使用。

1. Introduction

Power Concrete mixture truck series oil coolers has achieved good reputation since coming into the market. The total assembly products are combined together with heat exchanger, oil tank, fan guider, fan protection net thermal switch and the filter, the oil tank is together with the heat exchanger. The filter is connected to the tank. The model is for your reference in the sheet on Page 1.

2. Mounting Position and Connection style

To guarantee the cooling air flows smoothly and avoid the heat air flow back to the cooler, it is suggested that the cooler is supposed to be mounted where the cooling air is available.

The feet are connected with truck shelf. Anti-Shock block has to be mounted so that the cooler may get a long life application.

3. The oil tank

There are oil inlet and pressure balance on the top of the oil tank, if first use, the oil is supposed to reach the center of the oil gauge, make sure there is no air in the hydraulic system, the bolt must be closed when finished.

4. Electricity Connection

The motor for the cooler is Direct Current Motor, the life is 3000 working hours, the thermal switch must be used when the DC Motor is running. Because a DC motor is unsuitable for long time running.

五、温度开关

温度开关的作用是通过温度开关的“开/关”动作，保证风扇间歇地工作，该温度开关供货时已经提供。我公司可提供两种不同型号的温度开关。

温度开关的工作过程如下：在油温上升过程中，当油温升高到开关温度值上限时，温度开关接通，风扇开始运转，热量通过冷却风迅速带走，从而油温迅速下降；在油温下降过程中，当油温下降到开关温度值下限时，温度开关断开，风扇停止运转。

温度开关出厂时并未装在冷却器上，使用时将温度开关装在下封头端面的 M14×1.5 螺纹孔内。该螺纹孔在出厂时由一闷头堵塞，将其旋出，然后将温度开关连同密封圈旋入，拧紧。

注意：温度开关旋入冷却器时，扭力最大不得超过 20Nm，过大的扭力会损坏温度开关，造成根部开裂，由此产生的损坏不属于保修范围。

为避免温度开关因工作而“过热”，须使用一继电器，以保护温度开关。开关的使用参考电器原理图。

六、过滤器

过滤器通过法兰与冷却器连接。该过滤器为吸油过滤器，安装完毕后，整个过滤器浸在油中，仅端盖露在油箱外，通过端盖可更换滤芯，在更换滤芯时，过滤器会自动将油路切断，因此，在更换滤芯时，不必将系统中的油排空。过滤器装有真空表，用于显示液压油的污染程度。

5. Thermal Swith

The purpose of a thermal switch is to make the fan works discontinuously through the switch “ON/OFF” action. It is a standard spare part in the packing list. There are two different models available.

The procedure of a thermal switch is as following: When the oil temperature reaches the upper limit, the thermal switch will run, The cooling air brings the heat away, the oil temperature will be down. When to the lower limit, the thermal switch stops, and the fan stop running.

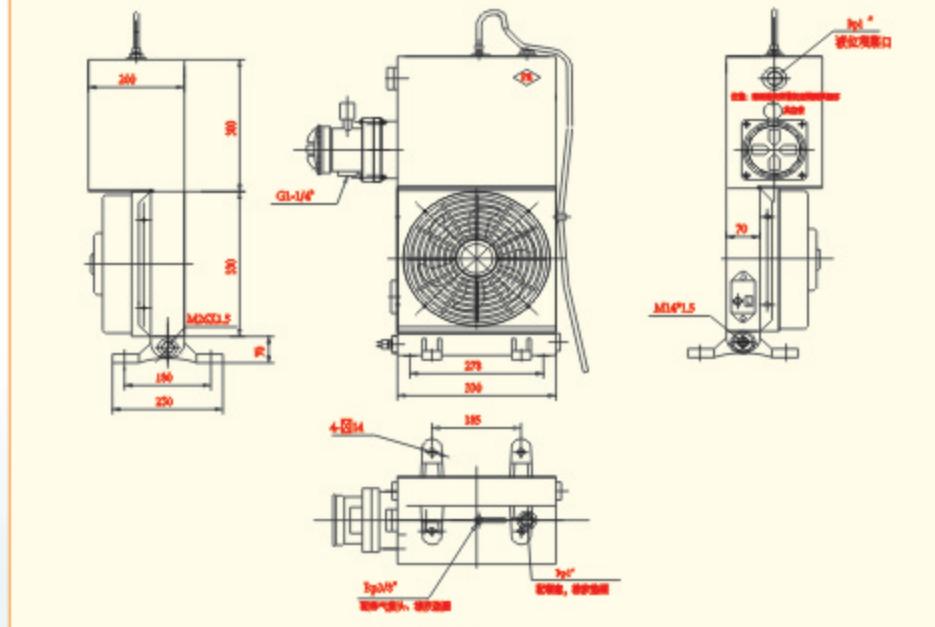

The thermal switch is not mounted on the cooler, when use, take off the bolts on the cooler, and connect M14×1.5 tap to the cooler, with a seal ring make sure no leakage and tight.

Note: When revolving the switch, the max Torque must be less than 20Nm, It is not in the quality assurance Area if the switch is destroyed by the torque.

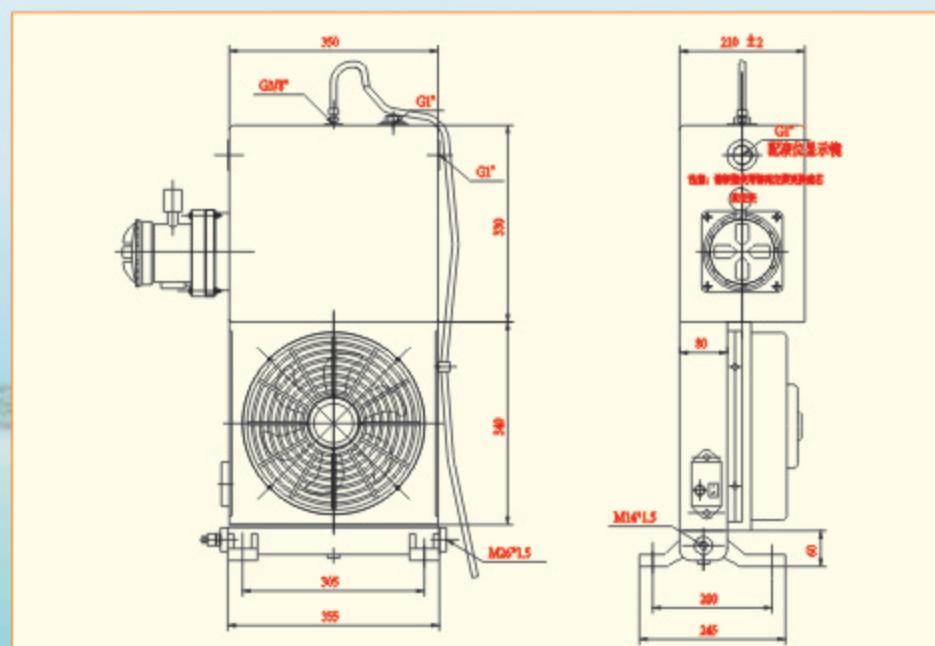

To avoid the heat and protect the thermal switch, It's better to use a relay. The way to use the switch please refer to the principle duawing.

6. The filter

The filter is connected with oil cooler through the flange. It is a oil-absorbing filter. After assembly, the filter was completely immersed in the oil except the lid. The filter core can be changed by the lid and when the filter core changed, the filter can stop the oil routeaway automatically. So it won't need to empty the oil in the system. The filter have a vacuum instrument which is used to show the contaminative degree of the hydraulic oil.
